

Enabling sites to do what sites do best.

Fortrea places sites and investigators at the forefront of trial planning and operations, working together to strengthen trial delivery and expand healthcare options for all.

Fortrea knows that sites are critical to successful trials. So we are changing the way we work with sites through our site engagement program.

By partnering with a diverse and global network of sites, we are listening to their needs, supporting them in doing what sites do best – delivering high quality clinical research as a care option to patients.

As a major global CRO we have established an integrated range of capabilities for sites centered around how we collaboratively plan, execute and deliver more efficient and reliable clinical trials, promoting greater patient access and connection with our communities.

Fortrea. A global CRO on a mission to change site relationships forever.

We are a global clinical research CRO with 30+ years of experience, helping sponsors take their assets through clinical research to the next phase in development.

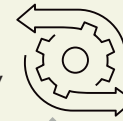

As we tackle today's drug, device and diagnostic development challenges, we are reengaging the industry to provide nimble and agile delivery models. We want to work side-by-side with our site partners to eliminate operational inefficiencies so we can help deliver life-changing therapies faster. For patients, for caregivers and for healthcare providers worldwide.

At Fortrea, we want to change the sponsor-CRO-site relationship forever. With our dedicated team, we have both the insights, experience, scale and processes to build the partnerships needed to get new treatments to patients faster.

Leveraging technology and process flow

Ensuring we are deploying fit-for-purpose technology that enables sites to execute trials with ease and success.

Site advisory network

Collaborating with sites to drive continual improvement in trial design, patient access and technology deployment.

Site network collaboration

Partnering with sites and site networks that have expertise in specific therapeutic areas to provide unique solutions for our sponsors.

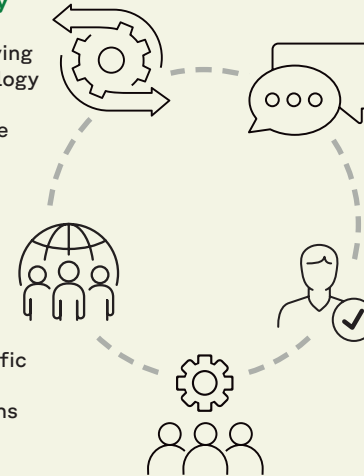

Site augmentation

Providing flexible staffing solutions to sites for administrative, clinical and virtual support.

Strategy and proposal development

Meeting with key sites to plan, design and review protocols and proposals.
